Figure S1 - Location of ODP Site 1262 at Walvis Ridge, South East Atlantic in yellow and the site of impact by a purple star. Plate reconstruction for the K/Pg interval created using the R package Chronosphere and Seton et al. (2012) configuration [1]. Additional sites discussed in the text are also included in red.

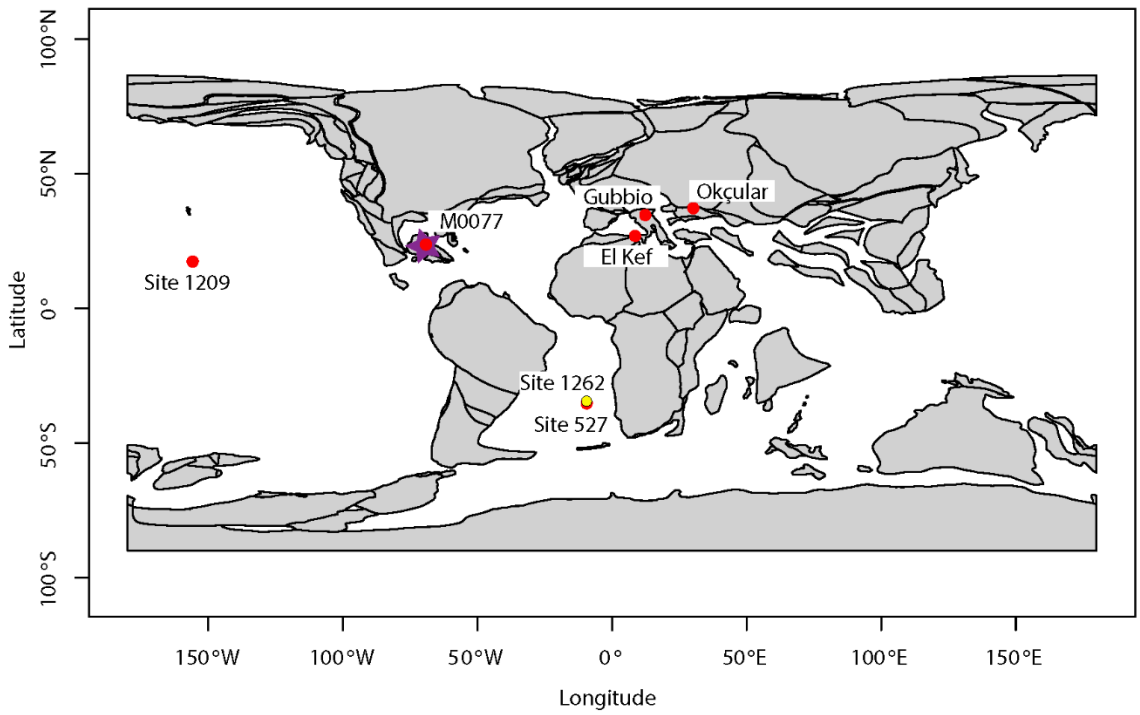

Figure S2 - The stratigraphic range of Palaeocene taxa at Site 1262. Colours denote ecogroups, Green = surface symbiotic, Light blue = transitional, dark blue= thermocline and orange = survivors and opportunists (see methods for full details). Ages are based on the tuning of the records to the latest orbital solution La2011, [2]. Horizontal black dashed line represents the K/Pg boundary and coloured numbered lines relate to significant steps in the recovery process; 1 – initial partial recovery of the surface-to-deep carbon gradients, 2 – 'Full' carbon gradient recovery, 3 –appearance of photosymbiotic ecologies (see [3] for details) and 4 – 'Full' planktic biotic recovery.

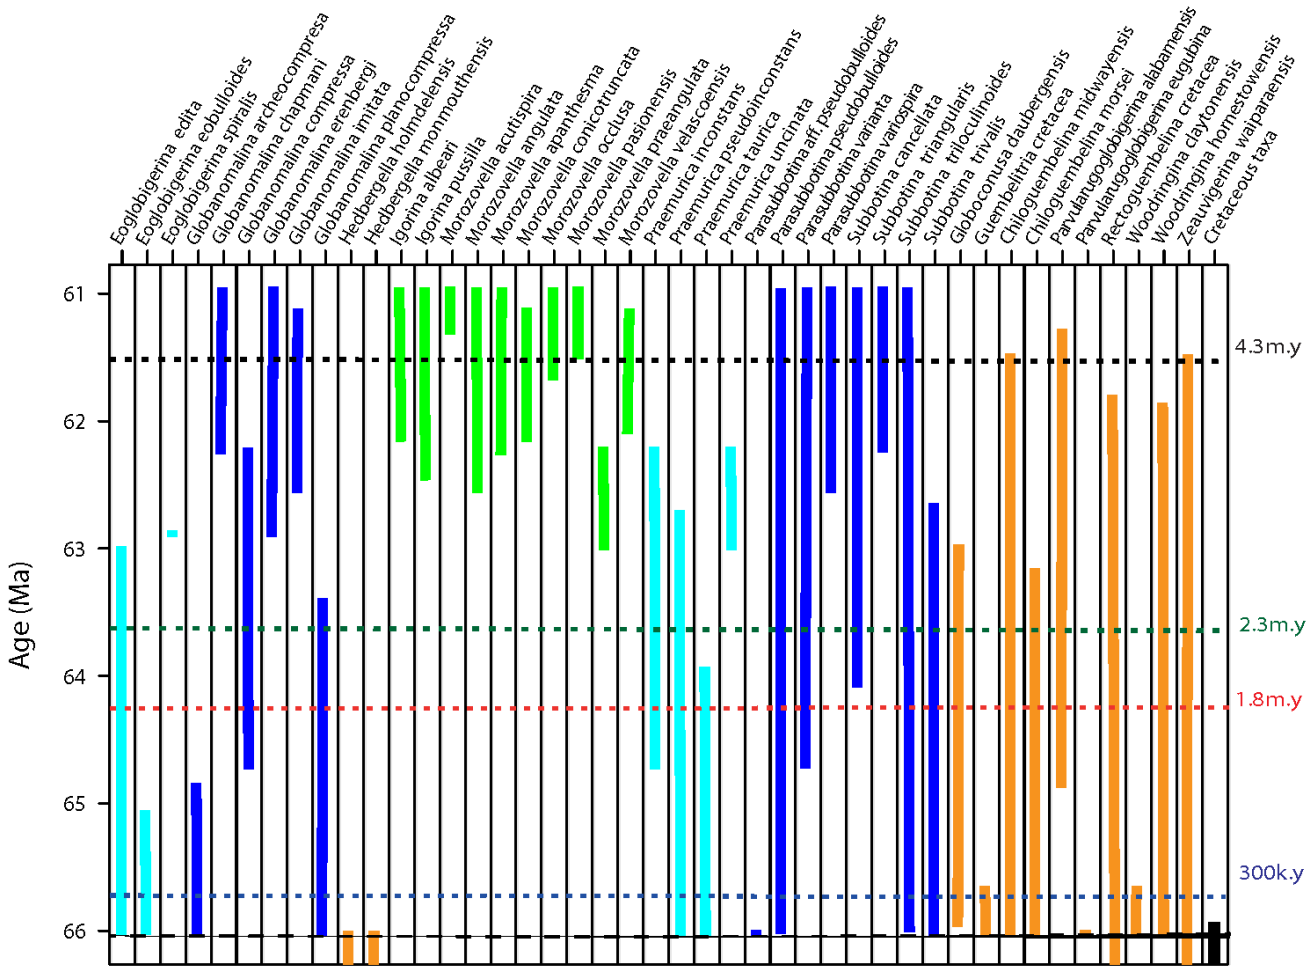

Figure S3 – Summed coefficient of variation metric (∑CV) ranked in order. Red dashed line indicates an inflection point at the higher values of (∑CV), denoting above background variation (following the method of [4,5].

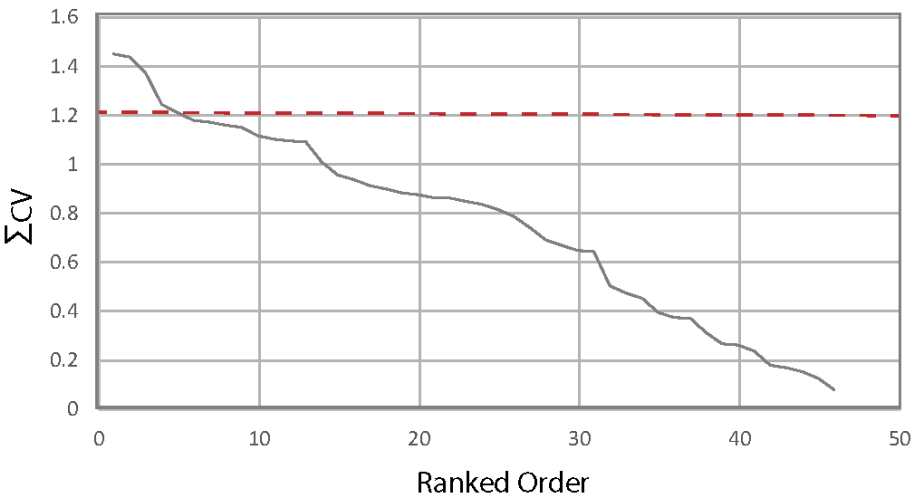

Tables

Table S1 – Size fractions utilised for weight analysis.

Size Fraction
>300 μm
250 – 300 μm
180 – 250 μm
150 – 180 μm
125 – 150 μm
106 – 125 μm
80 – 106 μm
63 – 80 μm
38 – 63 μm

Table S2 – Ecological groupings used in this study. The transitional taxa are those taxa lineages that start out as thermocline dwellers, but later adopt a surface and/or symbiotic ecology. Within the *Eoglobigerina* lineage, *E. eobulloides* and *E. edita* are thermocline dwellers whereas *E. spiralis* is a surface dweller [6–8]. Within the *Pramurica* lineage, *P. taurica* and early *P. pseudoinconstans* and *P. inconstans* were thermocline dwellers, but later *P. pseudoinconstans* and *P. inconstans* and *P. uncinata* were surface symbiotic species [8]. For Cretaceous taxa, where no species-specific data was available the generic level ecogroup was used.

	Ecogroup	**Genera**	**Source References**
Palaeocene	Survivor	*Hedbergella*	D'Hondt and Zachos 1993 [9]; Berggren and Norris 1997 [10]; Birch et al. 2012 [8]; Keller and Benjamini 1991 [11]; Arenillas et al. 2017 [12]; Khanolkar and Saraswati 2015 [13]
	Opportunistic	all microperforates; *Woodrinina, Chiloguembelina;* Globoconusa	
	Transitional	*Praemurica; Eoglobigerina*	
	Thermocline	*Globanomalina; Subbotina; Parasubbotina*	
	Surface/Symbiotic	*Morozovella; Igorina*	
Cretaceous	Opportunistic	*Heterohelix; Guembelitria*	D'Hondt and Arthur 1995 [14]; Keller et al. 2002 [15]; Abramovich et al. 2003 [16]
	Thermocline	*Abathomphalus*; *Globotruncana*; *Globotruncanella*; *Globotruncanita*
